Section B. Subject Index

Absorption, bringing climate models into agreement with observations of atmospheric, 1589
Advection, atmospheric moisture recycling: role of advection and local evaporation, 1368
Aerosols, scale effects on averaging of cloud droplet and aerosol number, 1268
African easterly jet, generation and role in determining West African precipitation, 1165
African easterly waves
  climate simulations of, 1747
  validation of the space–time variability in GCM simulation, 2831
Agricultural meteorology
  objective quantification of drought severity and duration, 2747
  precipitation trends on the Canadian prairies, 2996
Agricultural production, use of Southern Oscillation information in Texas sorghum production, 519
Air–sea flux climatology, new insights into ocean heat budget closure problem, 2856
Air temperature, seasonal prediction of North American surface temperatures, 380
Albedo
  regional trends in *Nimbus-7* outgoing long-wave radiation, 1458
  southern high-latitude ocean climate drift in a coupled model, 132
Aleutian low, decadal variability of, and relation to high latitudes, 1542
Algorithms
  EOF-based linear prediction algorithm, 2076
  use of Barnett and Preisendorfer algorithm, 303
Amazon, land surface influence on seasonal changes of convection in the tropical, 1306
Analog method, simple statistical downscaling technique, 2474
Analyses, reemergence of SST anomalies in the North Pacific Ocean, 2419
Analytical prototypes, ocean–atmosphere at midlatitudes, mechanisms for coupled gyre modes, 2757
Annual-mean climate, role of, on seasonal and interannual variability, 780
Anomalies
  determining atmospheric response to midlatitude SST anomalies, 1393
  interpretation of winter warming on Northern Hemisphere continents, 2947
  temperature and precipitation anomalies compared to ENSO warm phases, 3507
Antarctic, dynamic response of Greenland and Antarctic to multiple-century warming, 2169
Antarctic Circumpolar Wave, impact on New Zealand temperature and precipitation during autumn–winter, 960
Antarctic stratosphere, cooling of the polar stratosphere due to ozone depletion, 1467
Antarctica, net surface mass balance, 933
Arctic
  role of physical processes in interdecadal variability of sea ice, 3319
  observations, snow depth on Arctic sea ice, 1814
Arctic Ocean, explanation of the annual cycle of cloudiness of, 395
Arctic sea ice
  coupled arctic sea ice–atmosphere system, orbital forcing and ice motion, 873
  snow depth on, 1814
Arctic stratosphere, cooling of the polar stratosphere due to ozone depletion, 1467
Arctic weather
  Atmospheric Radiation Measurement Program on Alaska's north slope, 46
  influence of solar zenith angle and cloud type on cloud radiative forcing, 147
Asian summer monsoon, evolution of large-scale circulation and heating, first transition, 793
Atlantic ocean, dominant patterns of climate variability during the last 136 years, 2285
Atmospheric circulation, long-range correlations in extratropical, 1534
Atmospheric response, over North Atlantic to decadal changes of SST, 2562
Australia, wavenumber-3 pattern and the Antarctic Circumpolar Wave in, 3087
Baroclinicity, meridional temperature gradients and southern semiannual oscillation, 3376
Biennial variability, connection between theboreal spring and the Southern Oscillation, 610
Bond cycle, dynamical systems model of the Dansgaard–Oeschger oscillation, 2238
Boreal winter, longitude-dependent decadal changes of total ozone in boreal winter 1979–92, 1038
Boundary layer structure, role in the sensitivity of the tropical climate, 2359
Brine rejection, a destabilizing thermohaline circulation–atmosphere–sea ice feedback, 642
Canadian prairies, precipitation trends on the, 2996
Cane–Zebiak model, Asian summer monsoon–ENSO feedback and the, 2787
Canonical correlation analysis
  seasonal prediction of North American surface temperatures, 380
  use of Barnett and Preisendorfer algorithm, 303
Carbon dioxide
  Pacific Northwest climate sensitivity simulated by a regional model, 2031
  response of coupled ocean–atmosphere model to increasing, 2224
Carbon dioxide doubling
  Atmospheric Radiation Measurement Program on Alaska's north slope, 46
  coupled model to simulate interactions between vegetation and climate, 309
Central America, midsummer drought over Mexico and, 1577
China, water vapor flux and summer rainfall over, 1353
Circulation
  anomalies, large-scale, conducive to extreme precipitation events, 1506
  decadal changes in atmospheric circulation and climate variations, 494
  long-term trends and forcing mechanisms of climate and, 1134
  role in the sensitivity of the tropical climate, 2359
Circulation–sea ice feedback, destabilizing thermohaline circulation–atmosphere–sea ice feedback, 642
Cirrus clouds, cloud schemes in a single column model: mesoscale forcing and nudging, 438
Climate
  asymmetry, dynamics of the ITCZ–equatorial cold tongue complex and latitudinal, 1830
  fields, estimation of spatial degrees of freedom of, 1280
  forecasts, large-scale weather regimes and local climate over western United States, 1796
  instability, model of apparent climate instability in climate models, 1349

oscillations, North Atlantic decadal climate oscillations in a coupled GCM, observed, 2920
variability, mean monthly terrestrial climatology 1961–90, space–time, 829
variables, what determines the spectrum of a climate variables at zero frequency, 2124
variation, atmospheric circulation and climate variations in the Northern Hemisphere, 462
Climate change
climate variability and trends in SSU radiances, middle stratosphere, 3197
enhanced, and its detection over the Rocky Mountains, 230
interannual to decadal glacial variability in the Pacific Northwest, 3181
nonlinear dynamical perspective on climate prediction, 575
semi-empirical downscaling approach for predicting regional temperature, 103
statistical principles for climate change studies, 564
tropical oceans and, 3383
verification of GCM-generated regional seasonal precipitation, 258
Climate models
Atmospheric Radiation Measurement Program on Alaska's north slope, 46
bringing into agreement with observations of atmospheric absorption, 1589
comparison of near-surface air temperature variability in coupled GCMs, 511
ensemble atmospheric GCM simulation of climate variability 1979–94, 986
evaluation of the NCEP regional spectral model for regional modeling, 592
interannual and decadal variability in the tropical and midlatitude Pacific, 3402
land–atmosphere interaction for tropical, 857
long-range models estimating summer climate variability over southern Africa, 1892
model of decadal middle-latitude atmosphere–ocean coupled modes, 621
Northern Hemisphere storm tracks, present day versus last glacial maximum, 742
radiance covariance and, 1409
reduction of model systematic error by statistical corrections, 1974
semi-empirical downscaling approach for predicting regional temperature, 103
tropical oceans and, 3383
Climate prediction
European winters from atmospheric GCM seasonal simulations, 3033
nonlinear dynamical perspective on climate prediction, 575Climate sensitivity
Pacific Northwest climate sensitivity simulated by a regional model, 2010, 2031
Climate simulation
comparative analyses of physically based snowmelt models for, 2643
interactions between vegetation and climate in a doubled CO_2 atmosphere, 309
Climatological composite, analyses using t values, 2941
Climatology network, United States Historical Climatology Network and temperature trends, 1344
Clouds
cloud color and ocean radiant heating, 1101
combined satellite- and surface-based observations of clouds, 897
distribution of tropical, 2397
effects of cloud parameterization on simulated climate changes, 761
eight years of high cloud statistics using infrared sounder, 170
explanation of the annual cycle of cloudiness of the Arctic Ocean, 395
influence of solar zenith angle and cloud type on cloud radiative forcing, 147
mechanisms of cloud–climate feedback in GCMs, 1480
parameterization for cloud longwave scattering in atmospheric models, 159
precipitation from warm-topped clouds: eastern Asia and the western Pacific, 220
regional cloud cover change associated with global climate change, 2128
role in the sensitivity of the tropical climate, 2359
scale effects on averaging of cloud droplet and aerosol number, 1268
seen by satellite sounders and imagers, 2189, 2214, 3419
variations of Peruvian stratocumulus and SST in eastern equatorial Pacific, 3305
Cloud cover
in the ECMWF reanalysis, 947
trends and possible artifacts in global ocean cloud cover 1952–95, 1864
Cloud diagnostics, sensitivity of the CSIRO GCM: effect of cloud modeling assumptions, 334
Cloud ice advection, cloud schemes in a single column model: mesoscale forcing and nudging, 438
Cloud models, scale effects on averaging of cloud droplet and aerosol number, 1268
Cloud-top temperature, relationship among precipitation, cloud-top temperature, and water, 2503
Clustering, application of fuzzy grade-of-membership clustering to remote sensing data, 200
Cold tongue complex, dynamics of the ITCZ–equatorial cold tongue complex and asymmetry, 1830
Color, cloud color and ocean radiant heating, 1101
Comparative studies, spatial and temporal structure of atmospheric water vapor transport, 681
Control simulations, Pacific Northwest climate sensitivity simulated by a regional model, 2010
Convection
land surface influence on seasonal changes of convection in the tropical, 1306
parameterization of the tropical intraseasonal oscillation, 1423
patterns, southern high-latitude ocean climate drift in a coupled model, 132
submonthly convective variability and the South Atlantic convergence zone, 1877
Convective instability, soil–precipitation feedback: a process study with a regional climate model, 722
Coupled gyre modes, ocean–atmosphere interaction, analytical prototypes atmidlatitudes, 2757
Coupled models
analytical prototypes for ocean–atmosphere interaction at midlatitudes, 697
comparison of near-surface air temperature variability in coupled GCMs, 511
coupled Arctic sea ice–atmosphere system, orbital forcing and ice motion, 873
coupled ocean–atmosphere GCM, 2607
dynamic ocean–atmosphere model of the tropical Atlantic decadal variability, 64
errors in surface heat fluxes simulated by a coupled GCM, 416
global thermohaline circulation sensitivity to atmospheric transport, 71
global thermohaline circulation sensitivity to interactive transports, 83
impacts of double stomatal resistance on water resources, 3359

interactions between vegetation and climate in a doubled CO_2 atmosphere, 309
interpretation of winter warming on Northern Hemisphere continents, 2947
model of decadal middle-latitude atmosphere–ocean coupled modes, 621
North Atlantic decadal climate oscillations in a coupled GCM, observed, 2920
response of coupled ocean–atmosphere model to increasing carbon dioxide, 2224
response to CO_2 transient increases in GISS coupled model, 531
role of the annual-mean climate on seasonal and interannual variability, 780
simulation with a coupled atmosphere–ocean GCM including sulfur cycle, 3004
SST variability and its mechanism in, 1221
stability of thermohaline circulation in global warming experiments, 1117
wavenumber-3 pattern and the Antarctic Circumpolar Wave in, 3087
Coupled model drift, southern high-latitude ocean climate drift in a coupled model, 132
Coupled ocean–atmosphere, variations of Peruvian stratocumulus and SST in eastern equatorial Pacific, 3305
Coupled processes, tropical climatology, 1630
Coupling, influence of midlatitude ocean–atmosphere coupling on GCMvariability, 21
Cyclones, objective climatology of cyclones in the Mediterranean region, 1685
Cyclone days, climatic determinants and statistical prediction over Indian Ocean, 1738
Cyclostationary patterns, comparison of EOF techniques: nonstationary data with periodic statistics, 185
Dansgaard–Oeschger oscillation, dynamical systems model of the, 2238
Data
application of fuzzy grade-of-membership clustering to remote sensing data, 200
effects of data gaps on calculated monthly mean temperatures, 1524
observation time inferred from day-to-day temperature variations, 3443
surface radiation budget climatology derived from satellite, 2691
Data analysis
mean monthly surface pressure homogenization techniques for Europe, 2658
monthly modes of variation of precipitation over the Iberian peninsula, 2894
Data assimilation
assimilating TOVS humidity into the GEOS-2 data assimilation system, 2983
clouds as seen by satellite sounders and imagers, 3419
satellite–rain gauge merged product for real-time monitoring, 3335
Data-driven techniques, modeling the global solar radiation on the earth's surface, 3105
Datasets, clouds as seen by satellite sounders and images, 3I algorithms, 2214
Decadal changes
atmospheric circulation and climate variations in the Northern Hemisphere, 462
North Atlantic decadal climate oscillations in a coupled GCM, observed, 2920
Decadal predictability, coupled ocean–atmosphere GCM, 2607
Decadal variability
longitude-dependent decadal changes of total ozone in boreal winter 1979–92, 1038
mechanism of North Atlantic decadal variability, 1956
model of decadal middle-latitude atmosphere–ocean coupled modes, 621
Decision models, the use of Southern Oscillationinformation in Texas sorghum production, 519
Deep-layer mean temperature, deriving, from satellite and microwave data, 5
Deforestation, land–atmosphere interaction for tropical, 857
Deformation, comparison of EOF techniques: nonstationary data with periodic statistics, 185
Degrees of freedom, estimation of spatial degrees of freedom of a climate field, 1280
Detection of climate change, enhanced climate change and its detection over the Rocky Mountains, 230
Dissipation, cloud schemes in a single column model: mesoscale forcing and nudging, 438
Diurnal cycles, global monthly mean diurnal cycles in surface temperatures over land, 1900
Diurnal range, effects of clouds, soil moisture, precipitation, water vapor on temperature, 2451
Downscaling
analog method as a simple statistical downscaling technique, 2474
statistical and dynamical techniques for downscaling local climate, 2256
Drought
comparison between the 1930s and the 1980s in the Canadian southern prairies, 2434
midsummer drought over Mexico and Central America, 1577
objective quantification of drought severity and duration, 2747
reconstructions for the continental United States, 1145
Dynamic models, dynamic ocean–atmosphere model of the tropical Atlantic decadal variability, 64
Dynamical seasonal predictions, reduction of model systematic error by statistical corrections for, 1974
East Africa, Indian Ocean SST forcing East African rainfall, 3497
Eddy feedback, determining atmospheric response to midlatitude SST anomalies, 1393
Eigenvector coefficients, relationship between hyperplane width and PC loading patterns, 1557
El Niño
nonnormal nature and intraseasonal variability, 2965
simulation of onset and intraseasonalvariability of two summer monsoons, 1707
El Niño–Southern Oscillation
dynamical mechanisms of the 1995 California floods, 3220
hydrological extremes in the western United States, 2881
impacts on winter vegetable production, 92
interannual and interdecadal variability in SH tropospheric circulation, 2113
interdecadal changes, 2679
remote sea surface temperature variations during ENSO, 917
short-term climate extremes, seasonal temperatures, 3255
stochastic forcing by the intraseasonal oscillation, 1199
temperature and precipitation anomalies compared to ENSO warm phases, 3507
Energy balance
periodic solutions in low-dimensional climate models, 325
SST variability in relation to the surface energy balance, 1292
Ensembles
impact of large-scale circulation on tropical storm frequency, intensity, 3237
validating interannual variability in an ensemble of atmospheric GCMs, 2386
ENSO–monsoon
feedback, Asian summer, and the Cane–Zebiak model, 2787
system, interdecadal changes in the, 2679
Equality of variances, a simple test for equality of variances in monthly climate data, 1770

Equatorial Pacific, long-term trends and forcing mechanisms of climate and circulation, 1134
Equatorial Walker circulation, rotated global modes of non-ENSO sea surface temperature variability, 2735
Error correction, GCM systematic error corrections and specification from global SST, 273
Evaluation, statistical and dynamical techniques for downscaling local climate, 2256
Evaporation
  atmospheric moisture recycling: role ofadvection and local evaporation, 1368
  controls on evaporation in a boreal spruce forest, 1601
Evapotranspiration, soil–precipitation feedback; a process study with a regional climate model, 722
Extended-range forecasts, statistical model based on slow evolution of the Madden–Julian oscillation, 1918
External forcing, periodic solutions in low-dimensional climate models, 325
Extratropics, objective assessment of extratropical weather systems in simulated climates, 3467
Extremes
  estimating the effect of vegetation extremes on the atmosphere, 3156
  hydrological extremes in the western United States related to ENSO, 2881
  maximum temperature trends in the Himalaya and vicinity, 2775
  short-term climate extremes, seasonal temperatures, 3255
Extreme events
  large-scale circulation anomalies conducive to, 1506
  precipitation, long-term trends in, 2515
  temperature, climate variability and the frequency of, 2490
Feedbacks
  analytical prototypes for ocean–atmosphere interaction at midlatitudes, 697
  mechanisms of cloud-climate feedback in GCMs, 1480
Fingerprints
  optimal detection of global warming using temperature profiles, 1185
  statistical principles for climate change studies, 564
First transition, evolution of large-scale circulation and heating, first transition, 793
Floods
  dynamical mechanisms of the 1995 California floods, 3220
  numerical simulation of the 1992 Midwestern flood, 1490
Florida, El Niño–Southern Oscillation impacts on winter vegetable production, 92
Flux adjustments, southern high-latitude oceanclimate drift in a coupled model, 132
Flux correction, thermohaline circulation and multiple equilibria, 1382
Forcing, long-wave radiation and boundary layer thermodynamics forcing surface winds, 1049
Forest meteorology, controls on evaporation in a boreal spruce forest, 1601
Fourth-order models, study of land–atmosphere persistence with, 2154
Fuzzy logic, application of fuzzy grade-of-membership clustering to remote sensing data, 200
General circulation models
  analog method as a simple statistical downscaling technique, 2474
  analysis of passive tracer transport as modeled by an atmospheric GCM, 1659
  effects of cloud parameterization on simulated climate changes, 761
  errors in surface heat fluxes simulated by a coupled GCM, 416
  estimating the effect of vegetation extremes on the atmosphere, 3156
  GCM systematic error corrections and specification from global SST, 273
  impact of soil wetness on seasonal atmospheric prediction, 3167
  influence of midlatitude ocean–atmosphere coupling on GCM variability, 21
  mechanisms of cloud-climate feedback in GCMs, 1480
  model of apparent climate instability in, 1349
  predicting European winters from atmospheric GCM seasonal simulations, 3033
  spatial resolution and orography influence on GCM's ice sheet mass balance, 551
  validation of the space–time variability in GCM simulation, 2831
Glaciers, interannual to decadal variability in Washington, western Canada, and Alaska, 3181
Global climate, monthly mean diurnal cycles in surface temperatures over land, 1900
Global climate change, regional cloud cover change associated with, 2128
Global modeling, sensitivity of the CSIRO GCM: effect of cloud modeling assumptions, 334
Global ocean, trends and possible artifacts in global ocean cloud cover 1952–95, 1864
Global precipitation estimates, precipitation from warm-topped clouds: eastern Asia and thewestern Pacific, 220
Global series, structural time series models and temperature trend detection, 2347
Global temperature, covariability of North American climate with global SST, 289
Global warming
  abyss of the Nordic seas is warming, 3297
  dynamic response of Greenland and Antarctic to multiple-century warming, 2169
  interactions between vegetation and climate in a doubled CO_2 atmosphere, 309
  interannual, decadal–interdecadal, and global warming signals in SST, 1257
  optimal detection using temperature profiles, 1185
  role of water vapor feedback in unperturbed climate variability and, 2327
  stability of thermohaline circulation in global warming experiments, 1117
Greenland
  dynamic response of Greenland and Antarctic to multiple-century warming, 2169
  Ice Sheet, spatial resolution and orography influence on GCM surface mass balance, 551
High cloud, eight years of high cloud statistics using infrared sounder, 170
Homogenization, mean monthly surface pressure homogenization techniques for Europe, 2658
Humidity
  climatology and trends of United States surface humidity and temperature, 811
  data, assimilating TOVS humidity into the GEOS-2 data assimilation system, 2983
Hurricanes, fluctuations in North Atlantic hurricane frequency, 427
Hydrology
  hydrological extremes in the western United States related to ENSO, 2881
  land surface water deficit model for arid and semiarid regions, 244
Hyperplane width, relationship between hyperplane width and PC loading patterns, 1557
Ice sheets, dynamic response of Greenland and Antarctic to multiple-century warming, 2169
Ice thickness, a destabilizing thermohaline circulation–atmosphere–sea ice feedback,642
Ice water content, cloud schemes in a single column model: mesoscale forcing and nudging, 438

Indexes
comparison between the 1930s and the 1980s in the Canadian southern prairies, 2434
Madden–Julian oscillation's interannual variation during austral summer, 2538
objective quantification of drought severity and duration, 2747
Indian Ocean, interannual variability of the dynamics and thermodynamics, 2300
Indo–Pacific, annual rainfall cycle of the Indo–Pacific region, 1240
Inflation, statistical downscaling, 3505
Instabilities, and the fully coupled processes, 1630
Intensification, wind driven, of the Kuroshio Current extension, 1697
Interactions
among ENSO, transient circulation, and tropical convection over Pacific, 3062
cyclone dynamics, vertical thermodynamics, cloud radiative forcing, 2625
dependence of Caribbean rainfall on interaction of tropical oceans, 2093
Interactive transports, global thermohaline circulation, sensitivity with interactive transports, 83
Interannual predictability, in a coupled ocean–atmosphere GCM, 2607
Interannual variability
covariability of North American climate with global SST, 289
dynamics and thermodynamics of the tropical Indian Ocean, 2300
ensemble atmospheric GCM simulation of climate 1979–94, 986
interactions among ENSO, transient circulation, and tropical convection, 3062
Madden–Julian oscillation's interannual variation during austral summer, 2538
rotated global modes of non-ENSO sea surface temperature variability, 2735
seasonality of temperature gradient and ocean–land contrast and, 1086
total ozone and their relationship to variations of planetary waves, 1619
validating interannual variability in an ensemble of atmospheric GCMs, 2386
Interdecadal changes
covariability of North American climate with global SST, 289
ENSO–monsoon system, 2679
role of physical processes in interdecadal variability of sea ice, 3319
Intertropical convergence, dynamics of the ITCZ–equatorial cold tongue complex and asymmetry, 1830
Intraseasonal variability, nonnormal nature of El Niño and, 2965
Intraseasonal oscillation
development of south Asian summer monsoon and, 2054
stochastic forcing of ENSO by, 1199
Kriging, estimation of precipitation by, 1070
Kuroshio Current, wind-driven intensification of the Kuroshio Current extension, 1697
L moments, geographical patterning of interannual rainfall variability in the Tropics, 3457
Land–atmosphere system
numerical simulation of the 1992 Midwestern flood, 1490
study of persistence with a fourth-order analytical model, 2154
study of persistence using a GCM and observations, 2139
Land surface, land surface influence on seasonal changes of convection in the tropical, 1306
Latent heating, four-dimensional structures of monthly latent heating from satellites, 1016
Linear prediction algorithm, EOF–based, 2076
Loading cutoff, relationship between hyperplane width and PC loading patterns, 1557
Local climate
large-scale weather regimes and local climate over western United States, 1796
statistical and dynamical techniques for downscaling, 2256
Location, impact of large-scale circulation on tropical storm frequency, intensity, and, 3237
Long-range correlations, extratropical atmospheric circulation, 1534
Long-range forecasting, of Nile floods using ENSO information, 1726
Long-term trends, in extreme precipitation events over North America, 2515
Low clouds, an explanation of the annual cycle of cloudiness of the Arctic Ocean, 395
Low-frequency variability, principal modes of Southern Hemisphere low-frequency variability: NCEP–NCAR reanalysis, 2808
Mackenzie River basin, spatial and temporal structure of atmospheric water vapor transport, 681
Madden–Julian oscillation
convection parameterization of the tropical intraseasonal oscillation, 1423
interannual variation during austral summer, 2538
statistical extended-range forecast model based on slow evolution of, 1918
Mass balance
interannual to decadal glacial variability in the Pacific Northwest, 3181
net surface in Antarctica, 933
Maximum entropy method, fluctuations in North Atlantic hurricane frequency, 427
Maximum temperature
effects of data gaps on calculated monthly mean temperatures, 1524
maximum and minimum temperature trends in northern South America, 2104
Measurements, Arctic tundra and models, 2585
Mexico
midsummer drought over Mexico and Central America, 1577
summer plateau low pressure system of, 1002
Microphysical processes, cloud schemes in a single column model: mesoscale forcing and nudging, 438
Microwave scattering, precipitation from warm-topped clouds: eastern Asia and the western Pacific, 220
Milankovitch cycles, filtering of Milankovitch cycles by the thermohaline circulation, 1644
Minimum temperature
effects of data gaps on calculated monthly mean temperatures, 1524
maximum and minimum temperature trends in northern South America, 2104
Mixed layer, SST variability and its mechanism in a coupled model, 1221
Models
Arctic tundra and measurements, 2585
comparative analyses of physically based snowmelt model climate simulation, 2643
comparison, Northern Hemisphere storm tracks, present day versus last glacial maximum, 742
consistent model tropical, large-scale steady surface circulation, 2956
error, reduction of model systematic error by statistical corrections, 1974
intercomparison, interannual variability in an ensemble of climate simulations, 1322
mixture model for overdispersion of precipitation, 2528
objective assessment of extratropical weather systems in simulated climates, 3467
parameterization for cloud long-wave scattering in atmospheric models, 159
Modeling
controls on evaporation in a boreal spruce forest, 1601

land surface water deficit model for arid and semiarid regions, 244
modeling the global solar radiation on the earth's surface, 3105
Moisture
atmospheric moisture recycling: role of advection and local evaporation, 1368
fluxes, examining the interannual variability of land surface moisture fluxes, 1911
Monsoons
development of south Asian summer monsoon and intraseasonal oscillation, 2054
evolution of large-scale circulation and heating, first transition, 793
index, unified monsoon index for south China, 2375
rainbands, over China and relationship with Eurasian circulation, 115
relation among Eurasian snow cover, snow depth, and the Indian summer, 3117
simulation of the onset and intraseasonal variability of two summer, 1707
unified monsoon index for south China, 2375
variations of the relationship with summer and winter monsoons over India, 3486
Monthly climate data, simple test for equality ofvariances in, 1770
Monthly climatology, mean monthly terrestrial climatology 1961–90, space–time, 829
Monthly means, effects of data gaps on calculated monthly mean temperatures, 1524
Mountain weather, enhanced climate change and its detection over the Rocky Mountains, 230
Multidecadal variability, multidecadal simulations of Australian rainfall variability, 357
Multiple equilibria, thermohaline circulation and flux correction, 1382
Nested models, simulation of onset and intraseasonal variability of two summer monsoons, 1707
Neural networks, climate zonation in Puerto Rico based on principal component analysis and artificial neural networks, 977
New Zealand, impact on New Zealand temperature and precipitation during autumn–winter, 960
Nile floods, medium and long-range forecasting of, using ENSO information, 1726
Nonlinear dynamics, nonlinear dynamical perspective on climate prediction, 575
Nonstationary data, comparison of EOF techniques, with periodic statistics, 185
Nordic seas, warming, 3297
North America, long-term trends in extreme precipitation events, 2515
North Atlantic
deep water, global thermohaline circulation sensitivity to atmospheric transport, 71
mechanism of decadal variability, 1956
North Pacific Ocean, reemergence of SST anomalies in the, 2419
Objective climatology, cyclones in the Mediterranean region, 1685
Observations
bringing GCMs into agreement with observations of atmospheric absorption, 1589
combined satellite- and surface-based, of clouds, 897
comparison of satellite and in situ–based climatologies, 1848
variation with height and latitude of temperature trends in North America, 2551
Observation time, inferred from day-to-day temperature variations, 3443
Observational studies, relation among Eurasian snow cover, snow depth, and the Indian monsoon, 3117
Ocean–atmosphere
analytical prototypes for ocean–atmosphere interaction at midlatitudes, 697
coupling, influence of midlatitude ocean–atmosphere coupling on GCM variability, 21
interaction, analytical prototypes at midlatitudes, mechanisms for coupled gyre modes, 2757
Ocean circulation, global thermohaline circulation sensitivity to atmospheric transport, 71
Ocean heat budget, new insights into ocean heat budget closure problem, 2856
Ocean radiant heating, cloud color and, 1101
Orbital forcing, coupled Arctic sea ice–atmosphere system, response to ice motion and, 873
Oscillations, periodic solutions in low-dimensional climate models, 325
Overdispersion, mixture model for overdispersion of precipitation, 2528
Ozone depletion, cooling of the polar stratosphere due to, 1467
Paleoclimate, filtering of Milankovitch cycles by the thermohaline circulation, 1644
Parameters
clouds as seen by satellite sounders and imagers, 2189, 2214
influence of solar zenith angle and cloud type on cloud radiative forcing, 147
parameterization for cloud longwave scattering in atmospheric models, 159
Parameterization
convection parameterization of the tropical intraseasonal oscillation, 1423
effects of cloud parameterization on simulated climate changes, 761
Passive microwave, four-dimensional structures of monthly latent heating from satellites, 1016
Passive tracer transport, analysis as modeled by an atmospheric GCM, 1659
Patterns, effective number of spatial degrees of freedom for a time varying field, 1990
Patterning, geographical patterning of interannual rainfall variability in the Tropics, 3457
Periodic solutions, low-dimensional climate models, 325
Periodic statistics, comparison of EOF techniques, with periodic statistics, 185
Persistence, study of land–atmosphere persistence using a GCM and observations, 2139
Persistence barrier, the connection between the boreal spring and the Southern Oscillation, 610
Planetary wave activity, interannual variations of total ozone and their relationship to, 1619
Polar seas, atmospheric response to anomalous sea-ice extent in the Sea of Okhotsk, 3347
Polar stratosphere, cooling due to ozone depletion, 1467
Polar vortex, principal modes of Southern Hemisphere low-frequency variability: NCEP–NCAR reanalysis, 2808
Power usage, climate variability and the frequency of extreme temperature events, 2490
Precipitable water, relationship among precipitation, cloud-top temperature, and water, 2503
Precipitation
annual rainfall cycle of the Indo–Pacific region, 1240
dependence of Caribbean rainfall on interaction of tropical oceans, 2093
duration, monsoon rainbands over China and relationship with Eurasian circulation, 115
estimation by kriging in the EOF space of the sea level pressure field, 1070
examining the interannual variability of land surface moisture fluxes, 1911
generation of African easterly jet and West African precipitation, 1165
geographical patterning of interannual rainfall variability in the Tropics, 3457
Indian Ocean SST forcing East African rainfall, 3497
interannual variability in an ensemble of climate simulations, 1322

interannual variability of North American warm season precipitation regime, 653
large-scale circulation anomalies conducive to extreme precipitation events, 1506
long-term trends in extreme precipitation events, 2515
mixture model for overdispersion, 2528
monthly modes of variation over the Iberian peninsula, 2894
multidecadal simulations of Australian rainfall variability, 357
relationship among precipitation, cloud-top temperature, and water, 2503
satellite–rain gauge merged product for real-time monitoring, 3335
soil–precipitation feedback; a process study with a regional climate model, 722
temperature and precipitation anomalies compared to ENSO warm phases, 3507
trends on the Canadian prairies, 2996
verification of GCM-generated regional seasonal precipitation, 258
warm-topped clouds over eastern Asia and the western Pacific, 220
water vapor flux and summer rainfall over China, 1353
Predictability studies, conceptual framework, 3133
Prediction skill, seasonal prediction of North American surface temperatures: space–time PCs, 380
Predictive power, conceptual framework for predictability studies, 3133
Principal components
comparison of EOF techniques: nonstationary data with periodic statistics, 185
relationship between hyperplane width and PC loading patterns, 1557
Puerto Rico, climate zonation in Puerto Rico based on principal component analysisand artificial neural networks, 977
Radiances
climate variability and trends in SSU radiances, middle stratosphere, 3197
radiance covariance and climate models, 1409
Radiation
budget, evaluation of the earth radiation budget in NCAR–NCEP reanalysis, 477
longwave, and boundary layer thermodynamic forcing in the Tropics, 1049
modeling the global solar radiation on the earth's surface, 3105
Radiative properties, sensitivity of the CSIRO GCM: effect of cloud modeling assumptions,334
Radiosonde temperature, variation with height and latitude of trends in North America, 2551
Rainfall
correlation, with Eurasian atmospheric pressure fields related to monsoon rainbands, 115
variability, multidecadal simulations of Australian, 357
Random variables, conceptual framework for predictability studies, 3133
Reanalysis, evaluation of the earth radiation budget in NCAR–NCEP reanalysis, 477
Reanalysis system, cloud cover in the ECMWF reanalysis, 947
Reconstruction, drought reconstructions for the continental United States, 1145
Recycling, atmospheric moisture, role of advection and local evaporation, 1368
Regional climate
change, regional cloud cover change associated with global climate change, 2128
response to CO_2 transient increases in GISS coupled model, 531
semi-empirical downscaling approach for predicting regional temperature, 103
simulating effects of quasi-stationary wave anomalies on, 1336
verification of GCM-generated regional seasonal precipitation, 258
Regional models
evaluation of the NCEP regional spectral model for regional modeling, 592
Pacific Northwest climate sensitivity simulated by, 2010, 2031
Regional series, structural time series models and temperature trend detection, 2347
Remote observing, distribution of tropical clouds, 2397
Response time, periodic solutions in low-dimensional climate models, 325
River discharge, forecasting the anomalous discharge of the Caroní River, Venezuela, 2673
Salinity anomalies, simulation of thermohaline effects of a great salinity anomaly, 1781
Sample size, relationship between hyperplane width and PC loading patterns, 1557
Satellite data
annual rainfall cycle of the Indo–Pacific region, 1240
clouds as seen by satellite sounders and imagers, 2189, 3419
combined satellite- and surface-based observations of clouds, 897
comparison of satellite and in situ–based climatologies, 1848
deriving deep-layer mean temperature from satellite and microwave data, 5
evaluation of the earth radiation budget in NCAR–NCEP reanalysis, 477
four-dimensional structures of monthly latent heating from satellites, 1016
merging procedure for the MSI daily temperature time series, 3331
net surface mass balance in Antarctica, 933
radiance covariance and climate models, 1409
regional trends in *Nimbus-7* outgoing longwave radiation and albedo, 1458
satellite–rain gauge merged product for real-time monitoring, 3335
spatial patterns of climate variability in upper-tropospheric water vapor, 1940
surface radiation budget climatology derived from, 2691
tropical stratosphere temperature variability based on satellite data, 540
United States Historical Climatology Network and satellite-designated land use/cover, 1344
Satellite meteorology, eight years of high cloud statistics using infrared sounder, 170
Satellite observations
assimilating TOVS humidity into the GEOS-2 data assimilation system, 2983
cloud cover in the ECMWF reanalysis, 947
Sea ice
atmospheric response to anomalous sea-ice extent in the Sea of Okhotsk, 3347
destabilizing thermohaline circulation–atmosphere–sea ice feedback, 642
role of physical processes in interdecadal variability of central Arctic, 3319
Sea ice–overturning feedback, southern high-latitude ocean climate drift in a coupled model, 132
Sea level pressure
dominant patterns of climate variability during the last 136 years, 2285
estimation of precipitation by kriging in the EOF space of the, 1070
Sea level temperature, dominant patterns of climate variability during the last 136 years, 2285
Sea surface temperature
atmospheric response over North Atlantic to decadal changes, 2562
comparison of satellite and in situ–based climatologies, 1848
determining atmospheric response to midlatitude anomalies, 1393
Indian Ocean SST forcing East African rainfall, 3497

interannual, decadal–interdecadal, and global warming signals in, 1257
multiscale variability and relationship with tropospheric climate patterns, 2719
reemergence of SST anomalies in the North Pacific Ocean, 2419
remote sea surface temperature variations during ENSO, 917
variability and its mechanism in a coupled atmosphere–mixed layer model, 1221
variability in relation to the surface energy balance, 1292
variations of Peruvian stratocumulus and SST in eastern equatorial Pacific, 3305
Seasons, baroclinicity, meridional temperature gradients, and semiannual oscillation, 3376
Seasonal mean, GCM systematic error corrections and specification from global SST, 273
Seasonal prediction
impact of soil wetness on seasonal atmospheric prediction, 3167
North American air surface temperatures: space–time principal component, 380
Seasonal temperatures, short-term climate extremes, El Niño–Southern Oscillation, 3255
Seasonality, interannual variations of temperature gradient and ocean–land contrast and, 1086
Semiannual oscillation, baroclinicity, meridional temperature gradients and the southern, 3376
Sensitivity, response of coupled ocean–atmosphere model to increasing carbon dioxide, 2224
Severe weather, dynamical mechanisms of the 1995 California floods, 3220
Simulations
atmospheric response to anomalous sea-ice extent in the Sea of Okhotsk, 3347
climate, of African easterly waves, 1747
ensemble atmospheric GCM simulation of climate variability 1979–94, 986
numerical, of the 1992 Midwestern flood, 1490
objective assessment of extratropical weather systems, 3467
predicting European winters from atmospheric GCM seasonal simulations, 3033
simulating effects of quasi-stationary wave anomalies on regional climate, 1336
of thermohaline effects of a great salinity anomaly, 1781
study of land–atmosphere persistence with a fourth-order analytical model, 2154
Snow cover, relation among Eurasian snow cover, snow depth, and the Indian monsoon, 3117
Snow depth, on Arctic sea ice, 1814
Snowmelt, comparative analyses of physically based models for climate simulation, 2643
Societal impacts, El Niño–Southern Oscillation impacts on winter vegetable production, 92
Soil characteristics, correction to note on, 1549
Soil moisture, soil–precipitation feedback; process study with a regional climate model, 722
Soil–precipitation feedback, a process study with a regional climate model, 722
Soil wetness, impact on seasonal atmospheric prediction, 3167
Soundings, deriving deep-layer mean temperature from satellite and microwave data, 5
South America, maximum and minimum temperature trends in northern South America, 2104
South Asia, development of south Asian summer monsoon and intraseasonal oscillation, 2054
South Atlantic, submonthly convective variability and the South Atlantic convergence zone, 1877
South China, a unified monsoon index for, 2375
Southampton Oceanography, new insights into ocean heat budget closure problem, 2856
Southern Africa, long-range models estimating summer climate variability over, 1892
Southern Hemisphere
impact on New Zealand temperature and precipitation during autumn–winter, 960
interannual and interdecadal variability in Southern Hemisphere tropospheric circulation, 2113
timescales, principal modes of Southern Hemisphere low-frequency variability: NCEP–NCAR reanalysis, 2808
wavenumber-3 pattern and the Antarctic Circumpolar Wave in, 3087
Southern Oscillation
connection between the boreal spring and, 610
use of Southern Oscillation information in Texas sorghum production, 519
variations of the relationship with summer and winter monsoons over India, 3486
Southwest, impacts of double stomatal resistance on water resources, 3359
Space–time variability, mean monthly terrestrial climatology 1961–90, 829
Sparse data, the summer plateau low pressure system of Mexico, 1002
Spatial degrees of freedom
effective number of, for a time varying field, 1990
estimation of, of a climate field, 1280
Spectral models, evaluation of the NCEP regional spectral model for regional modeling, 592
Spectrally nonuniform albedo, regional trends in *Nimbus-7* outgoing longwave radiation and albedo, 1458
SST variability, rotated global modes of non-ENSO sea surface temperature variability, 2735
Statistical downscaling, inflation, 3505
Statistical models, 1871, 1873
Statistical prediction
and climatic determinants of cyclone days over southwest Indian Ocean, 1738
EOF–based linear prediction algorithm, 2076
Statistical principles, statistical principles for climate change studies, 564
Steady surface, consistent model tropical, large-scale steady surface circulation, 2956
Stochastic forcing, ENSO by the intraseasonal oscillation, 1199
Stomatal resistance, impacts of double stomatal resistance on water resources, 3359
Storm tracks
comparison between the 1930s and the 1980s in the Canadian southern prairies, 2434
cyclone dynamics, vertical thermodynamics, cloud radiative forcing, and, 2625
Northern Hemisphere, present day versus last glacial maximum, 742
objective climatology of cyclones in the Mediterranean region, 1685
Stratiform clouds, sensitivity of the CSIRO GCM: effect of cloud modeling assumptions, 334
Stratosphere
climate variability and trends in SSU radiances, middle stratosphere, 3197
tropical stratosphere temperature variability based on satellite data, 540
Streamfunction anomalies, principal modes of Southern Hemisphere low-frequency variability: NCEP–NCAR reanalysis, 2808
Subtropical gyre, decadal thermocline variability in the North Pacific Ocean, 3273
Sulfur cycle, simulation with a coupled atmosphere–ocean GCM, 3004

Surface
air temperature, effects of clouds, soil moisture, precipitation, and water vapor on range, 2451
analysis, summer plateau low pressure system of Mexico, 1002
energy balance, Arctic tundra, measurements, and models, 2585
heat fluxes, errors in, simulated by a coupled GCM, 416
mass balance, spatial resolution and orography influence on GCM's ice sheet mass balance, 551
pressure, annual variation on a high east Asian mountain and surrounding low areas, 2711
pressure, homogenization techniques for European monthly mean, 2658
radiation budget, climatology derived from satellite data, 2691
temperature, global monthly mean diurnal cycles over land, 1900
winds, longwave radiation and boundary layer thermodynamic forcing in the Tropics, 1049
wind stress, rotated global modes of non-ENSO sea surface temperature variability, 2735
Teleconnections, decadal variability of the Aleutian low and relation to high latitudes, 1542
Temperature
climatology and trends of United States surface humidity and, 811
comparison of near-surface air temperature variability in coupled GCMs, 511
effects of clouds, soil moisture, precipitation, and water vapor on range, 2451
maximum temperature trends in the Himalaya and vicinity, 2775
observation time inferred from day-to-day temperature variations, 3443
optimal detection of global warming using temperature profiles, 1185
seasonal prediction of North American surface temperatures, 380
seasonality and interannual variation of gradient and ocean–land contrast, 1086
structural time series models and trend detection, 2347
temperature and precipitation anomalies compared to ENSO warm phases, 3507
Temperature trends
maximum and minimum temperature in northern South America, 2104
United States Historical Climatology Network and satellite-designated land use/cover, 1344
Temperature variability, tropical stratosphere, based on satellite data, 540
Thermocline, decadal thermocline variability in the North Pacific Ocean, 3273
Thermohaline circulation
destabilizing thermohaline circulation–atmosphere–sea ice feedback, 642
dynamical systems model of the Dansgaard–Oeschger oscillation, 2238
filtering of Milankovitch cycles by the, 1644
global thermohaline circulation sensitivity to atmospheric transport, 71
global thermohaline circulation sensitivity to interactive transports, 83
multiple equilibria and flux correction, 1382
stability in global warming experiments, 1117
Thermohaline effects, simulation of a great salinity anomaly, 1781
Three-dimensional structure, climate simulations of African easterly waves, 1747
Time varying, effective number of spatial degrees of freedom for a time varying field, 1990
Taiwan, annual surface pressure variation, 2711
Tropospheric circulation, interannual and interdecadal variability in Southern Hemisphere tropospheric circulation, 2113
Total ozone
interannual variations and their relationship to planetary wave activity, 1619
longitude-dependent decadal changes in boreal winter 1979–92, 1038
Tracers, analysis of passive tracer transport as modeled by an atmospheric GCM, 1659
Trade wind cumulus, cloud cover in the ECMWF reanalysis, 947
Transient climate change, simulation with a coupled atmosphere–ocean GCM including sulfur cycle, 3004
Tree-ring chronologies, drought reconstructions for the continental United States, 1145
Trends
climatology and, of United States surface humidity and temperature, 811
long-term, and forcing mechanisms of climate and circulation, 1134
maximum temperature, in the Himalaya and vicinity, 2775
Tropics
distribution of tropical clouds, 2397
relationship among precipitation, cloud-top temperature, and water, 2503
role of the annual-mean climate on seasonal and interannual variability, 780
Tropical atmospheric bridge, remote sea surface temperature variations during ENSO, 917
Tropical circulation, a consistent model of the large-scale steady surface atmospheric, 2956
Tropical climate sensitivity, role of clouds, water vapor, circulation, and boundary layer structure in, 2359
Tropical climatology, instabilities and the fully coupled processes, 1630
Tropical convection, interactions among ENSO, transient circulation, and over Pacific Ocean, 3062
Tropical cyclones, climatic determinants and statistical prediction over Indian Ocean, 1738
Tropical forecasts, statistical extended-range forecast model based on slow evolution of MJO, 1918
Tropical oceans
climate and, 3383
dependence of Caribbean rainfall on interaction of, 2093
interannual and decadal variability in the tropical and midlatitude Pacific, 3402
Tropical storms
fluctuations in North Atlantic hurricane frequency, 427
impact of large-scale circulation on frequency, intensity, and location, 3237
Upper air, variation with height and latitude of temperature trends in North America, 2551
Variability
climate variability and the frequency of extreme temperature events, 2490
decadal changes in atmospheric circulation and climate variations, 494
decadal thermocline variability in the North Pacific Ocean, 3273
decadal variability of the Aleutian low and relation to high latitudes, 1542
dominant patterns of climate variability in the Atlantic Ocean, 2285
dynamic ocean–atmosphere model of the tropical Atlantic decadal variability, 64
examining the interannual variability of land surface moisture fluxes, 1911
Indian Ocean interannual variability of the dynamics and thermodynamics, 2300
interannual and decadal variability in the tropical and midlatitude Pacific, 3402
interannual, decadal–interdecadal, and global warming signals in SST, 1257

variability, in an ensemble of climate simulations, 1322
variability, of North American warm season precipitation regime, 653
long-range models estimating summer climate variability over southern Africa, 1892
mechanism of North Atlantic decadal, 1956
multiscale, and relationship with tropospheric climate patterns, 2719
nonnormal nature of El Niño and intraseasonal, 2965
role of the annual-mean climate on seasonal and interannual, 780
spatial patterns of climate variability in upper-tropospheric water vapor, 1940
submonthly convective, and the South Atlantic convergence zone, 1877
validating interannual variability in an ensemble of atmospheric GCMs, 2386
validation of the space–time variability in GCM simulation, 2831
water vapor flux and summer rainfall over China, 1353
Variances, a simple test for equality of variances in monthly climate data, 1770
Variation
atmospheric response over North Atlantic to decadal changes of SST, 2562
monthly modes of, of precipitation over the Iberian peninsula, 2894
Varimax rotation, rotated global modes of non-ENSO sea surface temperature variability, 2735
Vegetation
characteristics, correction to note on, 1549
estimating the effect of vegetation extremes on the atmosphere, 3156
interactions between vegetation and climate in a doubled CO_2 atmosphere, 309
Venezuela, forecasting the anomalous discharge of the Caroní River, 2673
Warm pool, SST variability in relation to the surface energy balance, 1292
Warm-topped clouds, precipitation from warm-topped clouds: eastern Asia and the western Pacific, 220
Warming climate, response to CO_2 transient increases in GISS coupled model, regional cooling, 531
Water deficit, land surface water deficit model for arid and semiarid regions, 244
Water vapor
feedback, sensitivity of the CSIRO GCM: effect of cloud modeling assumptions, 334
flux, and summer rainfall over China, 1353
radiances, spatial patterns of climate variability in upper-tropospheric, 1940
role in the sensitivity of the tropical climate, 2359
role of feedback in unperturbed climate variability and global warming, 2327
spatial and temporal structure of atmospheric water vapor transport, 681
Wave anomalies, simulating effects ofquasi-stationary wave anomalies on regional climate, 1336
Wave trains, principal modes of Southern Hemisphere low-frequency variability: NCEP–NCAR reanalysis, 2808
Weather regimes, large-scale, and local climate over western United States, 1796
Wind driven, intensification of the Kuroshio Current extension, 1697
Winter, atmospheric circulation and climate variations in the Northern Hemisphere, 462
Winter warming, Northern Hemisphere continents, 2947
Zero frequency, what determines the spectrum of a climate variables at, 2124
Zonation, climate, in Puerto Rico based on principal component analysis and artificial neural networks, 977
